CORE SKILLS

AI-Assisted Design
Agentic Prototyping
UX Research
Interaction Design
Design Systems
Service Blueprinting
Journey Mapping
Workshop Facilitation
Stakeholder Alignment

TOOLS

Claude Code
Cursor
Figma & FigJam
Miro
Storybook
Zeroheight
UserZoom
Surge
Vercel
Confluence
Jira

CERTIFICATIONS

NN/g Certificate in UX
Specialty: Interaction Design
UXC# 1084270 · Awarded 2024

EDUCATION

B.S. Human Computer Interaction
NJIT Ying Wu College of Computing
2021 – 2023

Certificate, UX/UI Design
Thinkful
Jan 2022 – May 2022

A.S. Digital Communication & Media
County College of Morris
2019 – 2021

LEADERSHIP

Chubb Aspiring Management Program
Co-op Interview Lead
Design Co-op Mentor

Work History

Oct 2022 – Present

Senior UX Designer, Design Systems

Chubb, Global Insurance

Joined Chubb's Agent Experience and Product Quoting squads before transitioning to the Design Systems team, where I now lead Digital Consumer initiatives across Global and North America.

- Contributed to design system evolution across Global and North American digital consumer products, including component creation, token architecture, and scaled cross-team adoption
- Develop scalable component libraries, living documentation, and agentic prompting practices using Figma, Storybook, and Zeroheight
- Drive digital consumer D2C propositions and partnerships, conducting large-scale UX research across North America, Austria, Philippines, Mexico, and EMEA
- Partner with product, engineering, and brand teams across time zones to ensure design coherence and accelerate delivery across the organization
- Facilitate design system governance, contribution workflows, and onboarding standards for partner teams
- Completed Chubb's Aspiring Management Program; led co-op hiring cycles and mentored design co-ops through real-world constraints

Key Projects

2026

From Manual Mapping to Guided Configuration

Redesigned Chubb's API Connect ingestion onboarding experience, introducing an AI-assisted expression builder that automates field matching and eliminates rework caused by schema changes.

- Conducted discovery research with data engineers to map workflow friction and define the information architecture for a complex onboarding experience
- Designed an AI-assisted expression builder with no internal UX precedent, balancing technical complexity with usability for a specialized-domain user base
- Deployed a live Surge prototype in 8 weeks, enabling stakeholder alignment and early usability validation

2025

Chubb Everyday: Agentic Prototype

Designed a unified D2C insurance platform POC in 1 week using a fully agentic workflow with Claude Code and the Chubb Design System MCP.

- Defined UX strategy and user flows for a multi-product D2C platform covering the full customer journey from awareness through policy management
- Built a production-quality prototype using Claude Code, Figma MCP, and the Chubb Design System MCP, compressing a 6-week sprint into under 7 days
- Demonstrated agentic prototyping as a scalable enterprise methodology, compressing a typical 6-week design sprint into under 7 days

2024–2025

Bringing Renters Insurance into the Digital Age

Led UX for Chubb's first D2C renters insurance platform — mobile-first, agent-free, and built for a younger customer segment through a fully digital purchase experience.

- Led mixed-methods UX research including contextual inquiry, moderated usability testing, and A/B testing across key purchase and policy management flows
- Designed mobile-first interfaces enabling customers to quote, bind, and manage coverage without agent assistance
- A/B testing produced a 94% task success rate against a 33% baseline, aligning stakeholders on core interaction decisions

2024–2025

Protect What You Collect

Took Chubb's Valuable Articles Coverage from a greenfield brief to a live self-service portal, enabling customers to quote, bind, pay, and manage jewelry and watch policies without an agent.

- Defined information architecture, user flows, and interaction design with no existing digital self-service precedent at Chubb
- Applied service blueprinting to align stakeholders across underwriting, operations, and digital on front-stage and back-stage processes
- Took the product from greenfield brief to live in under a year, expanding Chubb's self-service offering into a new segment

2022–2023

From Spoke to Suite

Executed Chubb's first design system migration, moving Cyber insurance quoting onto the company DS and consolidating it into Marketplace to unify the agent experience.

- Audited existing components, documented decisions, and produced a migration guide that became the internal standard for DS adoption at Chubb
- Resolved component gaps between the legacy product and the design system, maintaining design-to-code fidelity throughout
- Set the precedent and adoption playbook for DS migration at Chubb, enabling faster onboarding for subsequent product teams
